

# ENERGCON

## Focus on efficiency

Energcon visualises, manages and monitors the efficiency of buildings, processes and energy. User-friendly and transparent. Via engineering, tools and services.

## Focus on Energcon

Building management

Process control

Energy monitoring

The sustainable use of buildings, processes and energy. That's what Energcon is about.

We get to know your organisation, and based on this, provide technical and management support. Our work is product independent and flexible. **Building management, process control and energy monitoring** that makes it possible for companies as well as end users to save. And, equally important, to monitor and improve their efficiency.

## Engineering

Energcon keeps your projects on the right track. So you can stay focused on your own organisation. Together we determine the project's scope, budget and timing.

Our approach? It depends. We can **train** you or provide detailed **coaching**. But we can also take matters into our own hands via **interim management**. Our experienced energy consultants then follow up your project on-site, from beginning to end.

coaching

interim management

## Tools

Accurate measurements with Energcon. We know how and where to install **measurement points**. We then use **data collectors** to compile the measurements. We present these to you on a **dashboard** that you can view online. And the work we do is always **product independent**, which means that we install both modular systems and solutions that integrate with your existing systems.

Our strong points? Saving on **baseline consumption**: i.e. consumption that is always present within an organisation. And **KPI monitoring**, in which we make correlations between specific user cycles such as production runs or utilisation rates.

## Services

Energcon is flexible. We offer **building management, process control and energy monitoring** services tailored to your organisation. Our systems are modular. We **install** our own monitoring system, but can also integrate with other systems you may have.

The difference we make? Energcon always acts as facilitator. If needed, we can provide custom support. **Aftercare** for existing installation as well as for your organisation. This can range from contacting you in the case of problems, to full management of your energy consumption.
